Cotton Ginnings, 1993: A total of 15.7 million running bales were ginned during the 1993 season, 1 percent below 1992 ginnings of 15.8 million bales. Ginnings generally exceeded the 1992 pace due to a faster maturing crop and few weather delays during harvest. Active gins totaled 1,364 in 1993, down slightly from the 1,389 gins operating the previous year. As the number of gins continued to decrease, volume continued to increase. Last year, 324 gins processed between 15,000 bales and 40,000 bales and 60 gins processed more than 40,000 bales.

Cotton Production, 1993: All cotton production in the United States totaled 16.1 million bales in 1993, down 73,600 bales from 1992 production. Upland production, at 15.8 million bales, dropped 54,100 bales below the previous year, and American-Pima production fell 25 percent to 380,600 bales.

Planted area to all cotton totaled 13.4 million acres, up 2 percent from 1992, and harvested area, at 12.8 million acres increased 15 percent from the previous year. Abandonment during 1993 totaled 5 percent compared with 16 percent in 1992. Yields for the U.S. averaged 606 pounds per acre, 93 pounds below 1992 yields.

The Delta States suffered from drought, extreme high temperatures, and insect infestations during 1993. Plantings were delayed but eventually equalled the 5-year average pace. Boll development was reduced and yields declined from the potential indicated at the beginning of the season. Regional yields averaged 547 pounds, down 205 pounds from a year earlier. Production totaled 4.67 million bales, down 28 percent from 1992.

Production in the Southeast decreased 11 percent from the previous year to 1.84 million bales. Although harvested acreage was up 13 percent from 1992, regional yields, at 546 pounds, were down 144 pounds.

The Western States produced 5 percent more cotton in 1993, at 3.79 million bales. The increase resulted from a 4 percent increase in harvested acreage and yields averaging 1,290 pounds per acre. That average increased 18 pounds from the previous year. California yields declined only 19 pounds from the 1992 record high. Early season rain in California caused plantings to be late in 1993, but development was better than anticipated and yields exceeded earlier expectations.

The Texas-Oklahoma production, at 5.37 million bales, was up 54 percent from 1992, mainly due to Texas harvesting 91 percent of the acreage, compared with only 65 percent in 1992. Yields averaged 477 pounds per harvested acre, a 48 pound increase from the previous year.

Cottonseed: Cottonseed production in 1993 totaled 6.35 million tons, up 2 percent from 1992.

The next "Cotton Ginnings" report will be released at 3 p.m. ET on August 11, 1994.
